

Oliver Technologies, Inc.

On The Level and Oliver Technologies, both family-owned and operated companies have a long history of teaming together. My father, Jim Oliver not only pioneered the earthquake bracing industry in California but was at the forefront of testing and certification with Department of Housing and Community Development. In the late 80's On The Level was one of the first contractors to use the newly state-certified Safe-T-Beam ERBS product and the relationship has continued through our long line of product evolution. Scott Arendsen, now President of On The Level and I, in a similar position with Oliver Technologies, have had similar upbringings, both installing earthquake bracing in our teens for our family businesses. Understructure support systems are practically a part of our DNA.

As the industry has grown more sophisticated, the need for greater oversight is more important than ever before, especially when working with lenders, underwriters and HUD. One thing we can count on when collaborating together is the knowledge that performance and customer service is our bottom line. A working relationship of 24 years succinctly tells that story!

Sincerely,

Scott Oliver
